## EDUCATION

### University of Wisconsin Madison

Master of Science—Computer Sciences (CGPA: 3.9/4.0)

### University Of Washington

Graduate Certificate in Software Design and Development (CGPA: 3.8/4.0)

### Saint Mary's University of Minnesota

Bachelor of Arts (CGPA: 3.9/4.0)

- Majors: Computer Science, Business Intelligence & Data Analytics, Finance | Minor: Creativity & Inquiry
- Magna Cum Laude | 8 Dean's Lists | Delta Mu Delta National Honor Society Inductee

### Madison WI

Expected May 2026

### Bothell, WA

September 2023-March 2024

### Winona, MN

May 2022

## SOFTWARE ENGINEERING EXPERIENCE

rtNOW

### Full-Stack Software Developer

Frankenmuth, MI

May 2022-August 2024

- Identified organizational inefficiencies and developed scalable web-based software solutions, reducing appointment process time by 40% and improving overall operational efficiency by 25%.
- Designed, implemented, and optimized RESTful APIs, resulting in a 30% increase in data retrieval speed and enhanced user interactions across multiple platforms.
- Collaborated with stakeholders to gather requirements, develop solutions, and provide ongoing technical support, leading to a 95% client satisfaction rate and 15% faster project delivery.

## SOFTWARE ENGINEERING PROJECTS IN PRODUCTION

**Scheduler** *web application that facilitates the scheduling and delivery of the outpatient respiratory telehealth services*

- Spearheaded the development of a scheduling application used by 100+ users daily for over 8 hours, maintaining a 99% uptime.
- Transitioned patient scheduling from Excel to a fully integrated app, reducing scheduling time per patient by 80% and increasing customer satisfaction by 40%.
- Integrated real-time appointment tracking and automated reminders, decreasing missed appointments by 20% and boosting staff coordination by 30%.

**CoreLink** *web application that allows users to sign up for shifts and take incoming calls from inpatient hospitals*

- Contributed to the CoreLink application, reducing call wait times by 50% and decreasing server load by 80%, significantly enhancing system performance and user experience.
- Replaced a legacy polling mechanism with a WebSocket-based system, improving real-time data updates and reducing unnecessary server requests by 75%.

## OTHER PROJECTS

### Shell

- Developed a Unix shell in C, incorporating features such as command execution, input/output redirections, environment and shell variable management, command history, and built-in commands, with support for both interactive and batch modes.

### File System

- Built a FUSE-based Unix file system in C with RAID 0 and RAID 1 support, enabling basic file and directory operations, metadata management, and error handling, while conforming to specific on-disk data structures and RAID configurations.

## SOFTWARE ENGINEERING SKILLS

**Languages** - C, C++, Python, PHP, JavaScript, SQL, MySQL, HTML, CSS

**Frameworks & Libraries** - CodeIgniter 4, Vue, React, gRPC, Spark

**Tools & Technologies** - AWS, Git, GitHub, Bitbucket, Jira, Docker, Cassandra, HDFS, Kafka, BigQuery

**Concepts & Methodologies** - Application Development, RESTful API, Client-Server Architecture, Relational Databases, Test Driven Development, Software Development Lifecycle, Agile Methodologies, Data Structures & Algorithms, Object-Oriented Programming, Operating Systems
